

# Public Reporting Health Care Provider Performance:

What Do We Know?  
Where Do We Go From Here?

May 21, 2013

John Bott, Division of Insurance Services

# Agenda

- Macro framework of public reporting
- Status of public reporting nationally
- State of health care quality
- Relationship between quality & cost
- A few pictures of variation in performance
- Opportunities in quality & cost
- Discuss where we go from here

# Macro Level Framework For Public Reporting

**Performance reporting**

- Relevant measures & valid data
- Evaluable & low burden presentation

**External forces**

**Purchasers:** Publicly report, financial recognition for high performers, member incentives for selecting high performers

**Consumers:** Select high performers

**Public opinion:** Regard high performers more highly

**Internal forces**

**Delivery systems:** Recognize & reward performance. Improve areas measured.

**Plans & systems:** Select better providers for network

**Facilities & clinicians:** Refer people based on high performance

*Motivation to improve*

*Marketing of quality*

*Market share shifts ...*

More people receive high quality care

*Improvement in delivery of care ...*

Improved health

# Status of Public Reporting Nationally

- Exposed to and used comparative quality information in past year: 14%
- People who say there are “big differences” in quality: 30% - 44% (depending on provider type)
- People who say they prefer a hospital:
  - That is familiar: 59%
  - That is rated higher: 35%

Source: Kaiser Family Foundation: 2008 Update on consumers' views of patient safety and quality information. October 2008

# Drivers and Obstacles to Uptake

- We have not been reporting what is important to consumers
- Report design not based on best practices
- Provider community lack of support for consumers' right to access and use performance results
- Lack of shared decision making to engage consumer in referrals
- Skepticism of the data and the measures

# Status of Quality

- A study of Medicare recipients in a 1-month study (Oct. 2008) revealed <sup>1</sup>:
  - 134,000 (13.5%): at least 1 adverse event
  - 15,000 (1.5%): adverse event contributing to death
    - 44% of the adverse events were preventable
- The Centers for Disease Control & Prevention (CDC) estimated deaths associated with healthcare-associated infections in U.S. hospitals were 98,987 / year <sup>2</sup>:
  - 35,967: pneumonia
  - 30,665: bloodstream infections
  - 13,088: urinary tract infections
  - 8,205: surgical site infections
  - 11,062: infections of other sites

<sup>2</sup> Public Health Reports. March–April 2007, 122:160-166

# Status of the Cost of Poor Quality

- **Waste:** \$750B a year spent on waste in health care. Primary issues related to quality <sup>1</sup>:
  - Unnecessary care: \$210B
  - Inefficient care: \$190B
- **Complications:** Additional charge per admission when a preventable complication occurs <sup>2</sup>:
  - Post-op sepsis: \$108,802
  - Post-op respiratory failure: \$100,882
- **Potentially preventable admits:** Pennsylvania looked at 12 measures where improved care coordination could avoid many admissions <sup>3</sup>:
  - 185,190 admissions consisting of 868,564 inpatient days
- **Readmissions:** For Medicare recipients <sup>4</sup>:
  - Potentially preventable readmissions within 30 days: 17.6%
  - Spending for these readmissions: \$12B

# Status of Variation: CT Scan Overuse

## Why focus on CT scans?

- 29,000 cancer cases a year in the U.S. may be related to CT scans <sup>1</sup>
- The radiation from a typical CT abdomen exam equals 400 x rays <sup>1</sup>
- ...And that's the average. For each type of CT scan a study evidenced a 13 fold difference in radiation levels <sup>1</sup>
- CT scans have nearly quadrupled from 1996 to 2011 <sup>2</sup>
- Study of 6 large health plans, after adjusting for risk: we see a 32% variation in use CT Scans <sup>3</sup>

Variation in CT scans

# Opportunity: Quality and Cost

- A 40% reduction in preventable hospital-acquired conditions phased in over 3 years <sup>1</sup>:
  - 1,800,000 fewer injuries
  - 60,000 lives saved
- CMS Physician Group Practice Demo:
  - Shared savings for improving prevention & disease management. Result for Marshfield Clinic?<sup>2</sup>
    - Savings of \$1,119 per Medicare beneficiary / year
- Expand and encourage high-value choice of providers by consumers <sup>3</sup>:
  - Savings of \$41B over the next 5 years

<sup>1</sup> CMS's Partnership for Patients initiative to reduce a select set of hospital acquired conditions. 1<sup>st</sup> year based on 10% reduction, 2<sup>nd</sup> year : 20% , 3<sup>rd</sup> year: 40%

<sup>2</sup> JAMA, September 2012, 308:10

<sup>3</sup> The Commonwealth Fund: Confronting cost, January 2013

# Where Do We Go From Here, Part 1?

- Work with stakeholders in Wisconsin to arrive on a shared set of measures for use in public reporting
- Publicly report performance where we have:
  - Measures that are important to consumers
  - High volume and high cost
  - Variation in provider performance
  - A focus on outcome measures
  - Good performance measures and valid data

# Where Do We Go From Here, Part 2?

- It's Your Choice 2014 (released Fall 2013):
  - Minor revisions to wording and layout
- It's Your Choice 2015 (released Fall 2014) exploring further changes, such as reporting performance of:
  - Health plans
  - Hospitals
  - Individual physicians
  - Ambulatory surgery centers
