

Draft strategic initiatives in data and measurement

April 16, 2014

John Bott, Division of Insurance Services

Board	Mtg Date	Item #
GIBSPW	4.16.14	4B

Question #1:

Data and measurement for what goals?

- Increasingly members choose high value health care providers
- Members consequently receive higher quality health care
- The State realizes a savings compared to the trend

Question #2: How do we get there?

Primary strategies:

	Tiering	Reference value
Health plans	X	
Hospitals		X
Physicians	X	

Question #2: How do we get there?

Secondary strategies:

	Tiering	Reference value	Public reporting
Health plans	X		X
Hospitals		X	X
Physicians	X		X

Next steps in 2014:

Deliverables undertaken in year 1 “storming”

1. Identify quality and cost measures (i.e. value) for each use and unit(s) of analysis.

Examples of uses:

- Public reporting
- Tiering
- Reference value

2. Prioritize the measures and identify how they are to be computed (e.g. composites, value equation)

3. Identify data needs for each measure, e.g.

- data at hand
- readily available
- potentially available

4. A plan to test and calculate measures and data (e.g. outsource, in house, partners within SVC)

Select deliverables years 2 - 5

Year 2: Round 2 of measure calculation and data testing is completed (if a round 2 is needed)

Year 3: Revised measure specifications and data requirements
Completed provider review and comment period

Year 4: Dry run period concluded and any errors identified catalogued
Final report of performance results to providers for private preview period

Year 5: Go live
Example:
- public reports released
- tiering implemented
- reference value implemented
